

Design Checklist					
Project Name					
Reviewed Document	Analysis and Design Document				
Reviewed Feature/Scope	System Architecture, Database Design (ERD), Class Diagrams, Sequence Diagrams				
Number of Pass	0				
Number of Fail	0				
Number of N/A	0				
Number of Errors					
No.	Checklist Question	Review Result (Pass/Fail/N/A)			Notes
		Pass	Fail	N/A	
1	Does the design conform to structured methodologies?	☐	☐	☐	
2	Are there safeguards against data overflow?	☐	☐	☐	
3	Can the program specification be easily coded?	☐	☐	☐	
4	Are the screen layouts, report layouts, and table and file usage in the program specifications identical to those specified in the software requirements specification?	☐	☐	☐	
5	Have the error messages been defined?	☐	☐	☐	
6	Are the program specifications consistent with the software requirements specification process logic?	☐	☐	☐	
7	Was each entity transformed into a table?	☐	☐	☐	
8	Has each attribute been mapped to a field in the database table of the entity?	☐	☐	☐	
9	Has each key field been mapped to an index?	☐	☐	☐	
10	Have all foreign keys been specified NOT NULL (if applicable)?	☐	☐	☐	
11	Are there any data integrity rules that violate the referential integrity rules of the relational database management system?	☐	☐	☐	
12	Have the triggers, events, objects such as stored procedures and functions, and actions been defined where the relational database management system supports them?	☐	☐	☐	
13	Do all the views have a valid purpose?	☐	☐	☐	
14	Have the views that can be updated been correctly designed?	☐	☐	☐	
15	Have the free space parameters been set depending on table size and table use? Has enough free space been specified?	☐	☐	☐	
16	Have stored procedures been designed for frequently executed transactions?	☐	☐	☐	
17	Have all the queries been analyzed to determine the most frequently used columns in the DISTINCT, GROUP BY, ORDER BY, and WHERE clauses?	☐	☐	☐	
18	Have all the indexes created been used?	☐	☐	☐	
19	Have the bottlenecks in meeting performance requirements been identified?	☐	☐	☐	
20	Does the database implicitly provide for locking?	☐	☐	☐	
21	Have time-outs for locks and sessions been optimized?	☐	☐	☐	
22	Have the roles and schemas been adequately defined to address the security issues?	☐	☐	☐	
23	Have privileges and authorities, data access control, etc. been implemented?	☐	☐	☐	

24	Do the programming specifications fulfill the program objectives?	☐	☐	☐	
25	Have the common and shared functions been defined?	☐	☐	☐	
26	Has each module of the software requirements specification been included?	☐	☐	☐	
27	Have all the exception conditions been handled?	☐	☐	☐	
Conclusion	Fully Approved	☐			
	Conditionally Approved	☐			
	Rejected	☐			
Discussion
